

EVIOTA

Sustainable finance solutions for total impact assessment

Who we are

Eviota is a RegTech startup supporting companies in tackling the most prominent regulatory challenge of the coming years, the EU Sustainable Finance Framework and the related reporting requirements. We inform decision-making with a look-through view of the environmental and societal impacts of the activities of a company, its customers, suppliers, investors or investees. We unlock the value of open data to support our customers in assessing and reporting their total sustainability impact, and therefore managing risk, optimising funds, and achieving regulatory compliance.

What we do

Our peer-reviewed, scientific software estimates the total environmental and social impact of corporate activities throughout the value chain, and creates reliable, timely refreshed benchmarks. For all businesses - including smaller businesses who will only be indirectly affected by the new EU rules - our service is useful if they want to attract customers, investors, or lenders, who consider sustainability important. For larger entities, we support compliance with the many aspects of the EU Sustainable Finance Framework. We have solutions that are specially targeted at banks, insurance institutions and investors too.

Why now

The EU is introducing a ground-breaking accounting standard which will call on about 49,000 enterprises to assess 'double materiality', i.e. the financial and sustainability impacts of their own activities, as well as those of their buyers and suppliers. Does your company buy cattle to produce meat? You must consider the methane emissions of your suppliers. Do you manufacture cars? You must account for the fuel emissions of the users of your product.

Services

Insight

Enhanced ESG reporting with a simple, largely automated total environmental and social impact assessment of suppliers, buyers, and own activities based on industry benchmarks.

Allocation

Double materiality in the context of total supply chain impact. Separating supplier and buyer accounts which are likely to have an immaterial impact on environmental and social goals, and estimating the impact for reporting of those which have a material impact.

Integration

Total supply chain impact integrated with capital and risk modelling systems of financial institutions. Separating portfolio elements that are likely to have an immaterial impact on environmental and social goals, and estimating the impact for reporting of those which have a material impact.

Team

[István Simon, MBA](#) is an entrepreneur and former big four actuarial consultant and auditor, with a vision to build a highly automated information pipeline for sustainable finance.

[Dániel Antal, CFA](#) is a data scientist with banking consultancy, and regulatory experience. Most recently he worked on RegTech applications in the context of computational antitrust.

[Andrés García Molina, PhD](#) is a researcher with experience in scientific validation as well as corporate data science roles.
